

1 ABSTRACT OF THE DISCLOSURE

2

3 A garment hanger includes a crossbar member, a hook member coupled to the
4 crossbar member, and three clamp members coupled to the crossbar member. One of the
5 three clamp members is disposed in a central region of the crossbar member. Two of the
6 three clamp members are substantially disposed on opposite ends of the crossbar
7 member. The clamp members are used to engage and support a garment, such as a pair
8 of pants. Together, these elements can be used to reduce the vertical dimension of the
9 garment held by the garment hanger.
